Cover Story on Page 2

Campus work continues

For you returning students, you might have noticed a few changes around campus.

For starters, California Boulevard now ends at the entrance to Poly Grove. With the completion of the Highland Drive entry on Highway 1, the temporary roadway around the site of the construction of the new architecture building has also been eliminated.

Although you won't be able to drive into the inner campus, there is at least one good piece of news about the removal of the temporary roadway. The removal will uncover two tennis courts now covered by the road.

Even if the courts have been damaged, the construction company is obligated to restore them. So, it looks like the two courts will return but the same can't be said for the old road.

But roads aren't the only things that are changing around here these days. The interior of Chase Hall has been refurbished and repainted so that faculty offices can be relocated there.

And the motorcycle parking that you used near the old Air Conditioning Auditorium in Spring Quarter has been converted into spaces for trailers which will be used for faculty offices.

And speaking of the ACA, the High School Equivalency Program has vacated the building leaving space for faculty offices and an Art laboratory.

And for you dormies, 80 additional parking spaces to the S-6 lot extension is anticipated. Hopefully, the project will be completed before the Winter rains.

A word of caution for students looking for faculty instructors in Tenaya Hall you won't find them. What you will find is probably your lab partner in his room. The reason for this is that because of the housing shortage, Tenaya has been reconverted back to student housing and the members of the faculty have moved to the trailers on campus.

Citizenship of Hurtado under fire

by ROGER VINCENT

The question of Associated Students Inc. President Mike Hurtado's citizenship status has not been resolved.

Hurtado is under investigation by the immigration service regarding his birth records and naturalization. An immigration department spokesman said the investigation was ordered "a couple of months ago" by the main office in Los Angeles. The San Luis Obispo County district attorney's office is waiting for this investigation to be completed before taking any action of its own.

In mid July the Santa Maria Times raised the issue publicly, citing discrepancies in Hurtado's scholastic records and voter registration.

Hurtado says he was born in Mexico, but his mother is an American citizen. The 26-year-old journalism senior is the first minority student to attain the position of president at Cal Poly. During his four years at the university he has been active in school and community affairs.

Immigration authorities are waiting for Mexican officials to check out Hurtado's place of birth and other records before confirming or denying his naturalization. The district attorney's office is awaiting findings from that investigation before forming an opinion of a voter registration affidavit Hurtado signed in 1974 saying he was born in California, according to Asst. District Attorney Chris Money. Money said the matter "should have been resolved by now."

District Attorney Robert Tait said providing false information when registering to vote is a felony and punishable by one to 15 years in prison. But, he added, his office is more interested in determining the circumstances under which Hurtado registered to vote.

On the advice of his attorney, Hurtado would not comment on the voter registration affidavit.

Cal Poly Dean of Students Everett Chandler said it is possible that Hurtado is "technically"

An explanation

As announced in Spring Quarter, Mustang Daily will publish four days a week this year-Tuesday through Friday. With the creation of a Publications Manager position, along with the new Publication schedule, the paper will be at least eight pages every day.

Another change for the paper will be in the physical make-up of it. Changing the format to a traditional tabloid newspaper, Mustang Daily will print a full page photo or illustration on page one for each day. In addition, the paper will change from a five-column format to a six-column one.

And for the first time, the responsibilities of the editor will be divided among two co-editors. Hopefully, this change will allow the paper to cover the news which affects students directly in a more thorough manner.

Which brings up the philosophy of the paper. Our goal is to explore the issues concerning the students (housing, transportation, food, the arts and the university) and find any possible solutions.

Students are concerned about the cost of an item, its productivity and longevity. Whether the item be the registration fee, a car battery or a college education, students want to know if they're getting ripped-off.

With the changes that have been made so far and the philosophy behind the paper, we are confident students will pick up Mustang Daily and find a bit of news that is relevant to them.

Mike Hurtado

Hurtado's citizenship under investigation

(continued from page 2)

an illegal alien, but feels there is no basis for fraud on Hurtado's part. "He could have filled out a form a long time ago and become a citizen. He probably would have done that if he thought he wasn't a citizen. Mike may have believed he was a citizen all the time."

If Hurtado is found to be a Mexican citizen, he may be responsible for past tuition as a foreign student as well as reimbursing financial aid which he received through the Educational Opportunity Program (E.O.P.) at the university. But, Chandler said, the legal counsel of the state university and college system Chancellor's office is trying to see if Hurtado can be granted partial to total relief from these charges "since Hurtado did not intend to defraud the school."

Chandler even cited the possibility of legislative relief for Hurtado.

Hurtado said the president of the California State University and College Student President's Assoc. has contacted U. S. Senator Alan Cranston to get a bill introduced to "straighten out" a possible fee waiver and "allow me to deal with the situation myself."

"The chancellor's office felt there might be a possibility I had to straighten out something," Mike continued. "For 25 years I've lived here and my mother is a

citizen. I hope the bill would allow me to cut through the red tape and get my citizenship confirmed. The decision may come all the way down to this individual campus to see what they want to do."

Dean Chandler said one of the reasons Cal Poly assumed no intention of fraud on Hurtado's part was his transfer forms from Allan Hancock college in Santa Maria were "okay."

"Allan Hancock checked his residence," Chandler said.

Hancock Vice-President Dr. William Houpt said his secretaries had asked Hurtado several times to produce proof of American citizenship throughout his only complete semester there, Spring 1971.

"In August we sent two transcripts to Cal Poly as requested, but when he (Hurtado) tried to enroll for the Fall 1971 quarter we demanded proof of citizenship or foreign student fees. He dropped out."

Hurtado says he dropped out because he had been recruited by Cal Poly's E.O.P. program to start school there.

University officials confirm Hurtado enrolled for Fall quarter 1971, and has completed every quarter there ever since, including summer quarters.

Hurtado said that during Spring 1971 at Hancock he had his attorney ask immigration about his status in order to supply the college with the proof it demanded.

An immigration spokesman said the first orders they'd received to investigate came in mid-July 1975, and that "there would have been action before this if anyone had applied in 1971."

Hurtado says that although his attorney won't let him completely speak his mind on the citizenship issues raised over the last two months, he is confident of vindication. He feels that some persons are trying to make him feel "guilty until proven innocent."

Student says McNeal makes it fall together

by CAROL SOFFIETTO

If you're wondering if "Learn by Doing" is just a catchy phrase someone in the administration building dreamed up, talk to anyone taking a certain General Animal Science lab this year. I think you'll hear that Poly's philosophy is alive and doing well, thanks to Lyle McNeal.

McNeal, a 33-year-old animal science instructor, gives his class more than just lectures and reading assignments. He gives them a practical, working knowledge of various livestock operations.

In other words, something you can really sink your teeth into (and at this point, I'd like to

confirm all rumors he really does castrate sheep with his teeth.)

One week it's a swine lab, learning how to clip teeth and notch ears. Next time it's a sheep lab, where the students learn to "cast" (throw) sheep and worm them. But whatever is going on, you can bet the class enjoys it, and walks away feeling they actually learned something. Amazing.

"This is the only lab I've had—EVERwhere I felt the three hours weren't wasted," says Eric Henderson, a graduate student in Agricultural Education. And if that isn't testimony enough, Henderson adds, "The involvement is great. He really gets in there and helps the students who want to learn."

Perhaps that's the key to McNeal's method of teaching—involvement. Each student is given the opportunity to join in and is encouraged to do so. The results are entertaining as well as enlightening.

"I really like the labs, says McNeal. "The very important part is participation."

The class certainly does participate. Now I'll be the first to admit that castrating pigs made me feel slightly ill (I don't dare deny it. The whole class could see me race to the far end of the barn as soon as the scalpel came out). And I'll probably never be called upon to worm a sheep again. But it still provides new experiences—and very valuable ones for those who will continue in the field.

McNeal has been at Poly since 1969. He got his B.S. degree from Cal Poly Pomona, his M.S. degree from the University of Nevada, and is doing doctorate work at Utah State University.

But what qualifies him even more for his position is experience.

McNeal grew up around livestock in Montana. He was flock shepherd for two years at Cal Poly Pomona, as well as a

Lyle McNeal photo by TONY HERTZ

student horse trainer with the Kellogg Arabian horse program.

He sheared sheep for three years to pay for his education. Add to the above work done for the U. S. Sheep Experiment Station in Idaho, working experiences at a

list of ranches in various western intermountain states, and owning a small ranch in Idaho.

Put it all together and it becomes clear why when he talks, the students listen. Attentively.

Burned out? Take a bath

STEVEN SEYBOLD

A sensuous experience awaits you as you slip slowly into the steaming hot mineral baths at the Avila Hot Springs.

After weeks of caffeine rushes in the morning, nocturnal alcoholic douches and weeks of post-final celebrations, a bath in the 130 degree mineral water (cooled

down to suit your tolerance) is a welcome relief.

After an hour of lazing in one of the nine private baths, your body feels purged of all grease, dirt and foreign chemicals.

Your mind is totally relaxed and all tension of homework, tests and impending reports drift away as you walk slowly to your car in a rare moment of complete relief.

Avila Hot Springs is located at the Avila Beach turn-off just off of Highway 101 near Shell Beach. Along with the mineral baths two pools are provided of varying size and temperature. The large pool is 50 x 100-feet-long and has a temperature of 88 degrees.

A smaller pool is provided for soaking in its 105-degree-water and is 2-feet-deep in a 20 x 20-foot area. Along with these facilities there is also a whirlpool, two massage areas, and a limited space for trailers and campers.

The history of Avila Hot Springs is rich in humor and color. In the early 1900's a German-American named Herman Budan bought 200 acres on Oil Port Road (Avila Beach Road).

Bitten by the oil bug and smitten with dreams of riches he joined a group of people and formed the San Luis Bay Oil Company. Between May and November of 1907 drilling began and it soon became apparent that Budan had struck it rich.

Moments after drilling began a gusher of pure oil spewed out of the ground and only at four feet! Yet the thrill of a strike was short lived, for it was soon discovered that the drilling chuck had hit a Standard Oil pipeline from Southern California.

Undaunted by this disappointment drilling continued until

another gusher erupted from the ground. This time however, it turned out only steaming hot sulphur water. Daunted, the oil company dissolved.

It was then that the youngest daughter of Herman, Edith Budan, began capitalizing on the artesian wells. A year after the oil company dissolved Edith began promoting the hot water by building baths and a pool. Thus the hot springs began.

According to Robert Snowdy, owner and manager of the Avila Hot Springs, the resort continued

Pool at Avila Hot Springs

photo by TONY HERTZ

a colorful history during the Prohibition Era.

At that time the resort was a major stop for the fun-loving public. Allegedly, the hot springs resort was a source of gambling and liquor. The liquor was brought in by ships and stashed at the numerous caves at the nearby beach of Pirates Cove, later transported to the resort.

It is also believed that the resort was once a cathouse with the private baths serving as "offices". Think about that when you're taking a bath.

A point of interest lies in a large mirror inside the resort, allegedly a present of William Randolph Hearst, senior. (A question remains what, if anything, he received in return.)

With such a colorful history as this Snowdy emphasizes the intent of the resort facilities. No alcohol is allowed on the premises and the massages are licensed under California law. As Paula Snowdy, wife of the owner and manager, so candidly puts it, "If they're on a different trip, they sure won't find it in San Luis Obispo county."

The medicinal properties of the water are still a source of attraction. The water contains 61 per cent of Sodium and Bicarbonate residue which aids in the relief of Poison Oak and helps heal minor

cuts. The three per cent sulphur and many trace elements allegedly help in the relief of arthritic pain, and this is their main draw.

Admission prices into the pool is \$1.50 for adults and 75 cents for children under 12. A private mineral bath is \$2.50; whirlpool-\$1.50; and a massage (including bath and pool use) is \$20.00.

There are few rules so that the resort may maintain a family atmosphere. However if anyone gets out of hand Snowdy assures them they may be one the outside looking in.

Concerning his customers Snowdy says, "Never do we find a grouch on the way out, on the way in sometimes."

One departing guest summed up his feelings about the Hot Springs with a smile, "It's great for hangovers."

During the winter students and instructors from Poly often flock to the baths for a refreshing change and a discussion while soaking in the pools.

In fact, according to Snowdy, the instructors sometimes get so wound up in their discussions that they begin to disturb the "family atmosphere." But, he adds, they haven't been thrown out...yet.

Up-and in

another gusher erupted from the ground. This time however, it turned out only steaming hot sulphur water. Daunted, the oil company dissolved.

It was then that the youngest daughter of Herman, Edith Budan, began capitalizing on the artesian wells. A year after the oil company dissolved Edith began promoting the hot water by building baths and a pool. Thus the hot springs began.

Lyle McNeal

(continued from page 5)

And ask a dozen interested questions afterwards.

"I really like working with the students," says McNeal, adding, "I feel they are the employers." Keeping this in mind, he tries not to lose what he calls the "personal approach" to teaching. He makes an effort to learn all the students names as soon as possible, and likes to keep his door open for visitors so he can get to know people outside the classroom.

"I respect everybody for what they are," says McNeal. Because of this he doesn't "ridicule or embarrass intentionally," and respects the "rights and feelings" of his students. As he puts it, "I don't like to tromp on them."

With an attitude like that, it's easy to see why McNeal was presented the Distinguished Teaching Award in 1973. But he didn't use the award as an excuse to sit back and relax.

He feels you have "always got to be striving to be better," so he keeps up with new developments in the field by reading continuously.

The feeling he gives to the class may possibly be summed up best when he says, "I really believe in putting out the extra effort in teaching. I believe it's a real privilege to teach."

And when that kind of effort is being put out, it's a privilege to learn.

An experimental course offered by the psychology department is the result of Cal Poly President Kennedy's concern over the widespread use of drugs and alcohol among young people today.

Psychology 320X, Behavioral Effects of Drugs and Alcohol, a three-unit course taught by Dr. Peter Litchfield, covers a wide spectrum of subjects that relate to the uses and misuses of various drugs and alcohol.

Last year Pres. Kennedy called a meeting of Poly department heads and student body representatives to discuss the necessity of increased awareness of drug and alcohol abuse among faculty and students.

He asked for their constructive input in making information on the matter available to the university public.

The psychology department proposed a course that would scientifically and unemotionally explore the effects of drugs and alcohol.

The course, which was endorsed by Dr. Billy Mounts, director of health services on campus, the counseling center and the student body, was first offered last Winter quarter.

Says Litchfield, "This is not a course in social science. It is a course in natural science." He says that the course is based strictly upon objective data and is research-oriented.

"While various viewpoints are discussed, there is no philosophizing or moralizing. Literature (in this field) is filled with contradictory information. We look at it critically and keep the emotionality out of it," he says.

Litchfield says that because his course is still in the experimental stage, it is continuously being revised. Each quarter some topics have been omitted and new ones added to fit the interests of the students.

He says that some sign up for his course expecting it to be easy and fun. These students are surprised to find that they will not be sitting around encounter-group fashion discussing pot smoking and getting high. "This is not an easy, Mickey Mouse, fun course," he stressed.

Litchfield says that students who expect this type of course quickly become disillusioned and drop out. He says that in order to benefit from his course, students must work hard and become involved with the material.

Other than a sophomore standing, there is no prerequisite for taking the course. "It is offered to the general university public. It is not necessary for the students to

have biology or psychology backgrounds," says Litchfield.

He says, in fact, that his students come from almost every department on campus from agriculture to architecture. He says that the course is hopefully valuable to almost everyone, no matter what his background or career plans.

What material is covered in class? There are five major divisions of study. The first is methodological considerations: how the effects of drugs and alcohol are investigated, and the conclusions that can be drawn from data gathered.

The second is psychological dependence: the effects of drugs

that result from factors other than their chemistry.

Says Litchfield, "A drug can create behavioral changes not because of its chemistry, but because of the society's and the individual's attitudes toward it. A drug can be the doorway into a whole new personality development."

Third, hallucinogenic drugs, such as LSD, marijuana and mescaline, are explored. Neuro-physiological effects are studied in relationship to memory, motor performance, thinking, perception, learning ability, emotions and motivation.

Research on animals, as well as on humans, is discussed. "Some

of the most meaningful data comes from animal research," says Litchfield.

Fourth, uses and abuses of drugs, such as barbiturates (downers) and amphetamines (uppers) are studied. Also explored are clinical uses of anti-psychotic drugs, which, among other things, can control hallucinations of the mentally disturbed. Physiological addiction to heroin and methadone treatment of addicts is discussed.

Finally, the origins, theories and treatment of alcoholism are studied in depth. Says Litchfield, "A lot of the theories are extremely limited. There are many myths regarding the subject. Our infor-

mation on both alcohol and drugs is very scant. We hardly know anything about how they affect the brain and behavior. They're extraordinarily variable; they affect each personality differently."

Although the material is difficult, Litchfield says that students generally do well in the course. They are allowed to "learn what they want," he says. He does not expect them to learn all of the material because it is so technical. He gives extra credit on tests for creative thoughts, encouraging students to explore new areas.

Litchfield says the response to his course has been very favorable. Each quarter his classes have been overloaded, with "students sitting all over the floor."

Added to his own interesting material, Litchfield has guest lecturers, such as psychiatrists and pharmacologists, talk to his students on the areas of their expertise.

The Creamery—new and old

by MARK LOOKER

Two men have turned a seemingly impossible dream into reality by bringing life to the wreckage of the old milk processing plant on Higuera Street.

In its place stands the Creamery, San Luis Obispo's newest example of how recycling can work for buildings as well as paper and glass.

John Korelich and Jim Swift are the two men who have drawn applause from those who talk in such terms as "character" and "charm." Korelich, a developer-architect, and Swift, a restaurant manager, have seen their original idea for a Mexican restaurant grow into what is now a complex of 19 stores offering everything from plants to food to painting.

The Creamery, an L-shaped, brick and wood structure, fronts on Nipomo and Higuera Streets and was built in 1906 for the Golden State Creamery.

Today, the old warehouse lights still hang overhead and the milkcan lamps adorn the shop walls as shoppers stroll through what were once rooms used to pasteurize milk and freeze ice cream.

A majority of the shops are established businesses that have moved because the Creamery offers more room to expand and they report that business is better than ever.

The co-owner of The Greenery, Mary Cleeves, says that she and her husband Dick have found that

"business is much better since we moved here. We have more room and the location seems just right."

An assortment of supplies and accessories for indoor and outdoor plants are found here along with macrame pot holders that Mary makes herself.

But, established businesses aren't the only ones doing a good trade. People who have set up shop with no previous experience whatsoever report that the future is bright.

Co-owner of Katann Airbrush, Kathleen Reed, says that she started a business in the Creamery because "it was the nicest com-

plex in town and has a nice atmosphere."

A novice in the retail trade world, she reports that she and her co-partner, Marianne Carlson, have a week for stock that includes airbrushed clothes, puka shells and liquid silver bracelets.

The Creamery looks like a well planned venture that is paying its own way now but according to Korelich the whole thing just happened by chance.

"We had no deliberate plan," says Korelich. "We were just geared into using it as a shopping center."

The idea for the Creamery was first planted in 1974 when

Korelich, a 1972 architecture graduate of Cal Poly, was owner of Kore Construction Company.

He was approached by Swift, recently returned from a stay in Australia as a restaurant manager, with the idea of converting an old building into an ice cream factory.

Two months later, both men got serious about going into business together and settled on the Creamery as their location.

It was the fourth location they visited and they decided it was perfect for the Mexican restaurant they wanted to build.

SAN LUIS OBISPO**

by MARK LOOKER

The stark, rocky boulders attest to its volcanic origins. One of nine Morros that stretch from San Luis Obispo to Morro Bay, San Luis Mountain has been dormant for several centuries since its creation. This summer, however, it erupted.

The cause of the eruption was philosophical, not geological. The question centered around a basic question, "What rights does a property owner have?" In this case the property owner was Alex Madonna, a man who is, if San Luis Obispo is to ever have one, the arch patriarch of the city. A contractor-rancher-innkeeper, he is a man who has been praised and condemned for his construction of the Madonna Inn, a creation that has drawn national recognition to the city.

During the summer months, he decided to grade a fire road on his mountain. But was it "his" mountain? The debate raged in the editorial pages of the Telegram Tribune, at city council meetings, at Board of Supervisor's meetings and in the offices and living rooms of people throughout the city.

A sampling of two letters to the editor pretty much sums up how the two sides feel about the question:

"He owns it and he has the right to do anything he wants to with his land."

"He's raping the mountain."

The grading of what Alex Madonna terms "fire" roads on San Luis Mountain, began July 1. It divided the city's populace

Madonna's mountain — or is it really his ?

more sharply than any other issue in recent years.

Those who support the efforts cite his concern for the community and his concern for the mountain as evidence that he would not ruin the mountain's appearance.

Madonna himself, in a letter to the city council, said "It is my love for that mountain that motivated me to build a road to assist in protecting it from future fires."

Opponents, led by councilman Keith Gurnee, believe the roads are not meant for fire protection but are merely the first step in Madonna's previously announced plans to build a restaurant or hotel on the mountain.

Since he bought the mountain in 1973, Madonna has talked openly of putting a restaurant, lodgings and recreation facilities on it. He has often said that his dream is to create "something twice the size of Madonna Inn."

But details aren't known since he has not yet formally presented a proposal to the county planning department. Zoned now for agricultural purposes, the mountain must be rezoned to commercial use before building can begin.

The controversy began with a small brush fire atop the mountain on June 29, which charred a roughly 60-foot circle of chaparral. On July 1, Madonna began bulldozing roads on the northeast and south slope of the mountain. His bulldozers ran into more resistance than just some hard rocks. They ran into an angry councilman Keith Gurnee.

Gurnee began a course of action that would eventually go from the local courts to the city council and then the County Board of Supervisors, all with the same end result: The grading went on as the city contemplated buying the mountain. At the end of August the city council was still mulling over the problem of acquisition.

An acknowledged spokesman for students, minorities and the ecology-minded, Gurnee's first step was to attempt to get a temporary restraining order against Madonna. He questioned the legality of the grading but county officials said there was no violation of a county law which exempts grading "for agricultural purposes" from permit and environmental study procedures. Grading of the roads

for fire protection was a legitimate exemption, officials said.

Gurnee dropped his suit and at the July 7 city council meeting its members voted to send a letter to Madonna protesting his action and asked that he inform the council of his plans for the peak. The mountain is outside the city limits and the council could take not legal action to halt the grading.

At the next city council meeting no reply had been received and Gurnee asked that the city consider buying the mountain. More than 150 persons jammed the chambers for the study session and of the 40 who spoke, comment was evenly divided between those who supported Madonna and those who spoke for preserving the mountain and wanted the city to buy it.

Councilman Myron Graham lined up behind Gurnee's proposal with councilmen Steve Peterson and Jesse Norris opposed. Graham said it was a "natural thing" to say "our mountain" even if Madonna owns it. Norris said the mountain was "rightfully the county's problem."

Mayor Kenneth Schwartz said "I'm willing to take Mr. Madonna at his word. And his word to the public is that it's a fire road..." However, he made it clear that he would support condemnation proceedings should "it turn out differently." Right now, he said, the city didn't have the money necessary for purchase.

At its July 21 council meeting, the members voted to approve a detailed study that could lead to acquisition. Councilman Norris voted against the proposal and said the answer to peak preservation is not "more government." The city should not spend money for open space when money is lacking for other things, he said.

The council approved two other peak-related actions. One asked for state action to "protect" the Morros that stretch from San Luis Mountain to Morro Rock. The other was to ask the county for ordinance changes to better protect the environment.

The actions came after a four hour long meeting at which seventy persons took the microphone. Their comments were again evenly divided and more emotional than the week before. Gurnee at various times was branded a "Communist" and a "Fascist" and his recall asked for. Gurnee was elected last April to his second two-year term by the biggest vote margin in city history.

There were unanimous reservations, from both sides of the issue, about complete state acquisition. Gurnee and his supporters indicated that they would prefer to see the peaks as privately owned ranches but only "if the peaks are respected."

They buying of the mountain, at least the upper 140 acres above the pasture land on the lower slopes, appeared to be within the city's budget.

The city has \$180,000 in a reserve fund for peaks acquisition. The mountain above the brush line is roughly 150 acres. If that much of the peak cost \$1,000 an acre, the city would have the money.

Courthouse records show the cost per acre of the three ranches that Madonna bought to gain control of the peak. The roughly 135-acre Bianchi property cost \$1,680 per acre. The Olgiani property cost about \$560 per acre and the Alberti ranch about \$989 per acre.

The Bianchi property is the chunk that includes most of the major part of the top of the mountain. The top 80 acres are assessed at \$150 per acre.

City assessors were to look over the land and report to the council its estimate of a purchase price. The discussion of a price was held behind closed doors as the council met in executive session.

Madonna has consistently made clear his intention to fight city acquisition. Acting as Madonna's spokesman, radio station owner Homer Odom said Madonna would not sell.

If the city decides to buy the peak and Madonna resists, acquisition would involve condemnation proceedings and a court battle over the price.

The price awarded by a jury would be based on Madonna's purchase price, and what the land's potential as commercial property is. The biggest unknown is how Madonna's roads would affect the price.

Starting from the \$150 per acre assessment on the peak, even assuming a generous factor to account for assessment lag (the

Vets' info at Poly

The government may give, but it may also take away. Veterans attending Poly under the GI Bill are being warned that the government will recover overpayments of GI benefits.

According to the Veterans Administration Office in Los Angeles, overpayments will be deducted from future checks until the amount is paid. The unwarranted bonuses are generally due to veterans not reporting changes in their status, number of dependents or in the type of training. More information is available at the campus veterans office.

Veterans are also being warned by John Miller, VA official, to check up on their life insurance policies issued by the VA.

Problems on the peak

(continued from page 10)
mountain was last assessed a year ago, the price for the peak as agricultural land appears to be within the city's budget.

But many citizens expressed the same sentiment as Councilman Norris and felt the money could be better spent elsewhere. He pointed to recently raised sewer fees and proposals to raise water rates. Talk about peak preservation "should take place in the supervisor's chambers," claimed Norris.

It was exactly the supervisor's refusals to take any action that prompted the council's action and one councilman, Steve Petterson, vented his frustration. "I really doubt that they (supervisors) can get together and do what needs to be done on this subject," he said. "Because some supervisors (in reference to Hans Heilman, Howard Mankins and Milton Willeford) are unwilling to put restrictions on

property and enforce state laws," they are for "forcing land from private hands into public ownership.

Petterson's sharp remarks were brought about by the Board's defeat of two plans to halt further road construction. Supervisors Kurt Kupper and Richard Kresja fought for an ordinance and resolution to protect the mountain from development. They were voted down by Heilman, Mankins and Willeford.

The state Attorney General's office entered the picture late in August when a deputy attorney general made an air inspection of the roads. Sylvia Cano, of the environmental section of the attorney general's office, said she had come to update an investigation and take pictures.

She would not state what action—if any—might be taken or when. If the Attorney General Evelle Younger determines that the state Environmental Quality

Act is being violated, he can initiate a lawsuit and seek a restraining order or injunction.

As the dog days of summer drew to a close, the controversy was cooling off and the city council debated whether to initiate acquisition of the mountain. But the matter was sure to heat up once the council made its decision.

As one observer concluded, "It's a case of 'dammed if they do' (continued on page 13)

**HERB IS GOING TO BE A UNITED STATES ARMY OFFICER. AND HE
WILL ATTAIN THAT GOAL THROUGH HIS COMPLETION OF THE
MILITARY SCIENCE PROGRAM HERE AT CAL POLY.**

We mentioned some of the material benefits that Herb will enjoy as an Army officer. Perhaps more important is the experience in leadership and management that Herb will gain as an officer plus the personal satisfaction that comes from doing challenging, meaningful work. Our Military Science program is designed to prepare all of our cadets, both men and women, to meet the challenge of life as an officer in the United States Army.

HERE IS HOW THE CAL POLY MILITARY SCIENCE PROGRAM SHAPES UP

FRESHMAN YEAR—

MSc 101-A one hour per week-one credit course in the evolution of warfare, concepts of international balance or power.

MSc 102-A one hour per week-one credit course in the U.S. defense establishment.

MSc 103-A one hour per week-one credit course in U.S. military history and the principles of war.

JUNIOR YEAR:

MSc 301-A four hour per week-four credit course in advanced leadership, principles and methods of army instruction and counterinsurgency techniques and tactics.

MSc 303-A four hour per week-four credit course in small unit tactics and tactical communications.

TOTAL CREDIT HOURS-25

WE SPLIT THE FOUR COLLEGE YEARS IN HALF and call the freshman and sophomore years the **BASIC COURSE**; the junior and senior years the **ADVANCED COURSE**.

All students are eligible to apply for full ROTC scholarship awarded on a competitive basis.

All **ADVANCED COURSE** students draw \$100 per month up to \$1000 per year or \$2000 total for the junior and senior years.

ADVANCED COURSE students who qualify can enroll in a free civilian flight instruction course.

VETERANS SKIP THE **BASIC COURSE** and enroll directly in the advanced course.

SOPHOMORE YEAR:

MSc 201-A two hour per week-two credit course in land navigation using military maps and compass.

MSc 202-A two hour per week-two credit course in the principles of personnel management.

MSc 203-A two hour per week-two credit course in the principles of military tactics and operations.

ADVANCED CAMP:

Following completion of MSc 301 and 303, a six-week intensive leadership training and development exercise held at Ft. Lewis, Washington. (salary & expenses)

SENIOR YEAR:

MSc 401-A four hour per week-four credit course in advanced leadership, military justice, methods of coordination and planning among elements of military team.

MSc 403-A four hour per week-four credit course, a continuation of MSc 401.

WHAT IF YOU HAVE MISSED SOME OF THE BASIC COURSES?

You can take 100 and 200 level courses concurrently. Or, if you have sophomore standing, you can complete the basic course by attending the ROTC **BASIC CAMP** at Ft. Knox, Kentucky (salary & expenses) the summer between your sophomore and junior years and then enter the Advanced course your junior year.

All texts and materials necessary for Military Science courses are supplied free of charge.

WE DON'T THINK THE ARMY IS FOR EVERYONE-

But if you're a cut above, and you want a challenging job when you graduate, stop by the Military Science Department in Dexter Library. We would be happy to discuss the ROTC program with you at length. Telephone 546-2371

Rape, occurs often-although rarely reported

by PATTI CALLAHAN
A frequently committed, but seldom reported crime in the U. S. is rape. Every 10 minutes out of the day women are subjected to a horrifying experience—rape. With the aid of "Rape Crisis Center" those victims will be helped upon request.

Within the last four months a group of interested women have been working in hopes of organizing a center for the needy. Those women have now established in San Luis Obispo a Rape Crisis Center and it is extremely involved with aiding any rape victim. The center has over 50 volunteers working around the clock assisting females in distress.

The first training program established by the center was held on June 21, the second session was held on July 3. The center's hot line number is 544-6162 and is open 24 hours a day for assistance.

The Rape Crisis Center consists of a director, assistant director, legal committee, medical committee, police committee, speakers bureau and volunteers or advocates. The advocates are "on-call" specialists which enables them to aid the victim in what ever she wants done, under no circumstances does she lose control.

Advocates are of all ages suited for the victim; there are:

Spanish speaking advocates, teen advocates, mature advocates and elderly advocates. The advocates are designated a six-hour shift, one day per week and during that shift always in teams of two.

Very much a part of the center, Ann Bernhardt sympathizes with those victims of rape, as she states, "There are lots of prejudices about rape as a crime." One point is that all women victimized of rape didn't "ask for it." In many instances a friend, neighbor,

relative or boyfriend was the rapist. During a survey 151 rape victims showed the following:

38 percent of the rapists were total strangers.

7 percent of the rapists were known by sight.

14 per cent of the rapists were relatives, family, friends or boyfriends.

30 per cent of the rapists were neighbors or acquaintances.

Statistics prove that rape victims are not the subjects of psychotics, but in fact 30 per cent of all rapes in one study was known (continued on page 18)

Madonna

(continued from page 11)
and dammed if they don't. No matter what they decide, this town is going to be involved in a debate that touches some very basic rights."

What comes first? The right of the public to enjoy the unspoiled beauty of a mountain that looks over the city? Or the right of the property owner to develop his land as he sees fit? Should the city spend money to buy the mountain? Or should it be spent on improving the downtown area?

These questions loom large in the minds of city and public officials. And as some 14,000 college students return to town to see what the summer has wrought, there will be no doubt be a call to action by those who proclaim "He's raping the mountain," and those who believe "He owns it and he has the right to do anything he wants to do with his land."

Whether this latest eruption of the mountain will be fatal to it or not is still up in the air. Whether the conflict of ideas can be far stronger than any geological forces, remains to be seen.

We're here to HELP not to HASSLE

When you see one of our tow trucks on Campus, we are there because someone called us for assistance. If you ever have car trouble of any kind call 544-6111... we'll be right there.

She just hates her old flames

by CHERYL WINFREY

A grain fire blazes. Water, 300 gallons a minute, slices through a two and a half inch fire hose, five times the diameter of a typical garden hose. Fifty pounds of pressure, twice that of a garden hose, sends the water through a two-inch nozzle as the nozzleman struggles to aim the spray at the base of the flames. One or more backup firemen help handle the hose, keeping it straight and acting as a safeguard should the nozzleman lose control. An uncontrolled charged hose will whip about with enough strength to dent cars and break legs.

The nozzleman, peering through the smoke is a 5-foot, 2-inch, 115-pound Cal Poly coed.

Jan Colby, 19, a sophomore in physical education, is a seasonal fire fighter attached to the Nipomo Forest Fire Station. She is one of two women fire fighters working in San Luis Obispo County for the California Division of Forestry.

Colby recalls an incident she experienced as a fire fighter: "We

were covering for La Panza (station) which was covering a larger fire. I was the nozzleman. It was really exciting. You turned around and couldn't see the fire truck it was so smoky. I was really in the fire."

Colby's home town is Glendale. For the past year Miss Colby had lived in San Luis Obispo. She was encouraged to apply for the job by a friend working in Redding as a fireman. Her interest in the outdoors, hiking and snow skiing was a contributing factor.

After six weeks of work Miss Colby expressed her reactions: "It's great, but you really have to want to do it. If you're just a women's-libber, it's no good. A lot of these guys are conservative."

Before being hired applicants had to pass a demanding physical agility test. The test consisted of a series of sit-ups, push-ups, jumping exercises and a shuttle run. The applicants also had to run an obstacle course with 80-pound hoses strapped to their backs.

As a fire fighter Jan works a 120-hour week. For five days she is

Firefighter Jan Colby.

photo by CHERYL WINFREY

on call 24 hours, living at the station. She then has two days off.

"There have been problems," Colby said. "It's the first time they've had a woman here; it's hard for the guys to accept. Just having a girl around (is a problem). Also, a lot of the wives don't really like it. I'm with their husbands more than they are, some of them."

In spite of initial difficulties Colby said she enjoys her work: "Things have worked out pretty well. I like the station. The crew is good and I get a lot of training."

A normal shift has an 11 person crew. When not fighting fires they spend time training. New fire fighters must have 16 hours training before they can ride the trucks.

Jan described the training: "Everyday we do something different: emergency first aid, practice marking hose lays (roll out coiled hose and attach more hose to it). We've used trees before and the garage pretending to put

out a fire. Usually we end up in a water fight."

Colby said a routine day at the station begins at 6:30 a.m. with exercises. Breakfast follows an hour later with time in between to clean up. One of the problems worked out at the start was the showering arrangement: men shower in the morning, Jan showers at night.

Meals are prepared by a cook. Colby said, "We take turns doing KP. After your day off you stay in the kitchen and help."

The rest of the morning is spent in working around the station: painting, doing yard work, cleaning hoses and waxing trucks. Sometimes training sessions are held in the morning.

Lunch usually is served at noon followed by a daily volleyball game to help keep in shape.

Afternoons normally are spent in training. This may include working with a hook and ladder.

After dinner firemen are restricted to the station but are normally on their own.

Colby will continue working until the fire season closes which may be mid-October or November depending on the weather. If the weather stays warm and dry the season is extended. She would like to continue with the Forestry Division: "I'd like to go up into the mountains and be a fireman."

Seasonal fire fighters must re-apply for jobs each year. Starting salary for Jan was \$548 a month for a 120-hour work week. In addition she had to buy her own uniforms.

Forestry fire fighter's, engineers and captains work an 84-hour week. The shift is normally four days on, three days off, three days on and four days off.

Jan would recommend her job to other women: "If they really want a job and like to get in and work. You learn a lot."

Poly coed studies abroad

How much does your university weigh? A strange question unless your school is the 18,000 ton ship S.S. Universe Campus. And this fall the question is for Suzanne Eileen Williams.

Williams was admitted to the World Campus Afloat program of Chapman College where she and 325 students will study the origins of civilization.

During the three months of classes, labs and seminars the floating university will stop in 12 countries. There the students will be able to study the social, economic and cultural lifestyles of the residents through field trips and research projects.

Portugal, Greece, Venezuela and Columbia are among the ports of call for the child development major. The ship will also stop in Algeria, Yugoslavia, Turkey, Egypt, Lebanon, Senegal, Trinidad and Haiti.

The ship sailed from Port Everglades, Florida on Sept. 5 and will return there on Dec. 19.

Alcohol abuse is still major drug problem

by LYNN JENNINGS

Jay is an alcoholic. He is also a student, and has been at Cal Poly for the past three years. Jay discovered his alcoholism about nine months ago and has been on a program of recovery ever since.

Alcoholism frequently is referred to in the media as "the number one drug problem." It is a disease much like diabetes or hypoglycemia, and can be fatal if not treated.

"The diabetic cannot eat sugar. His body won't metabolize it properly. I take alcohol into my system and my body doesn't metabolize it right. My thinking becomes cluttered. My speech becomes incoherent. And more especially, I think, psychologically I just do an about face and become another type of person, a person I don't want to be anymore," Jay explained.

While the physical and psychological effects of alcohol on the alcoholic are painfully destructive, the individual cannot do without the drug. He or she is addicted. Dr. Billy Mounts, of the Cal Poly Health Center describes it as a physical and emotional habituation. The alcoholic is "one who is controlled by alcohol instead of the opposite, and is emasculated by using it," Dr. Mounts said.

A survey taken by Michael Looney of the Health Center Mental Health team showed that 57 per cent of the respondents who drink do so because of "sociability." Indeed, many social functions revolve around drinking. One young woman said she could no longer feel comfortable with her drinking friends, because "they think I'm strange because I don't drink."

Although many people can be "heavy drinkers" for much of

their lives, they are not necessarily alcoholic. But those who are, often go for years without realizing it or don't admit it because of certain moral implications. "The idea of it being a disease, at first I didn't but it. I thought it was a moral thing. I really did. I thought I was a moral leper," said Jay.

The effects of Jay's disease once brought him to the brink of suicide. He admits that it is difficult to live with an alcoholic, and that families are often broken because of this.

"I became hypercritical. I wouldn't get physically violent, but I'd get very abusive in my language. I became obnoxious, grossly obnoxious. I became defensive about what I was doing. I was hostile, belligerent, stuff like that," he said.

Dr. Mounts said the health center staff treated 12 cases of alcohol-related accidents and injuries during Poly Royal weekend and that three or four cases each weekend during the academic year are not uncommon.

The Health Center now has an alcohol abuse program. Any student who needs help can go the Health Center Monday through Friday, 8 to 5 p.m.

There he or she can receive counseling from the nurse on duty, and the doctors are on call. In addition, the program now has a drug called Antabuse. The student must not drink for 72 hours, then can take a pill daily with the assurance that if he takes a drink, he will become violently ill.

The alcoholic's view of Antabuse is not one of complete trust.

Jay said, "The minute you take away the Antabuse, the threat is gone. There's nothing wrong with it. But I think there's more to the problem of alcoholism than

photo by CHRIS VAN RY

A not so typical scene.

just drinking itself."

Dr. Mounts said that Antabuse is not a cure for the alcoholic, and that those using Antabuse could profit from Alcoholic Anonymous or some other program.

Jay said his program has helped him to be more aware of himself.

"I have become able to be totally honest with myself." He believes that is the first step to recovery.

Oceano has its drama, too

by SUSAN RAMSDEN

The tiny coastal community of Oceano, south of San Luis Obispo, boasted an unusual new theater this summer. The Great American Melodrama provided a rollicking good time for patrons with high camp drama that was big in the 19th Century.

The small theater is the realization of a dream that started three years ago in the minds of two talented, ambitious dramatists: Johnnie Schlenker and Annette Gillespie.

Both Santa Marians have impressive backgrounds in theater work. Schlenker and Ms. Gillespie, who are co-owners and producers of the melodrama, are both drama instructors. Schlenker teaches at Righetti High School and Ms. Gillespie is now technical theater director at USC, after having taught at Hancock College and Santa Maria High School.

Schlenker serves his fledgling theater in many capacities, including acting and directing. Ms. Gillespie's expertise lies in the technical areas. She is accomplished in set design and construction and in lighting.

Schlenker says he has recruited talent from all over California for

his show. "It's summer stock in its truest form. I looked for all-round theater people who could act, sing, construct sets, light, etcetera," he says. His 16-member company is made up mostly of college students, several of whom are from Hancock.

The theater's first production was "Ten Nights in a Bar-Room", a classic temperance drama in which the evils of alcohol are, sometimes comically, sometimes tragically, illustrated.

Says Schlenker, "Sweeny Todd is a murderer who makes Dracula look like the leader of the Girl Scout camp." He explains that it's all just good clean fun though. "It's entertainment that the entire family can enjoy."

The theater building itself is half the fun. Once a Rexall drug store, it is now a Jaycee meeting hall that has been rented and refurbished by the company. What it lacks in size and comfort, it makes up for in gaiety and charm.

Why did they settle in Oceano rather than San Luis or Santa Maria? Says Schlenker, "I wanted it near the beach. I was aiming at the tourist crowds." He originally had considered Pismo, but decided against the area.

U.S. not lucky for Irish pair

by MIKE CONWAY

Two Irishmen named Pat and Mike passed through San Luis Obispo a while ago but their trip from the Emerald Island wasn't all fun for them.

A friend of theirs had been "detained" here earlier that night for being drunk in public.

They were ticketed in Los Angeles for crossing against a red light and in Texas they were threatened with a quick haircut if they didn't leave town immediately.

Pat is from County Cork, Ireland. Mike is from Belfast, Northern Ireland. They came to see America.

"It's a beautiful country," Pat said. "But we've been hassled a lot by the pigs. It was cool in New York but out west we've gotten hassled a lot. The people don't seem as cool."

"Mike and I got ticketed for crossing against a red light in L.A.—one of those lights that flash on and off in red." Pat said a heavy brogue. "Hell, the cop knew we were foreigners, he asked us for some identification and all we had were our passports. But he still gave us the tickets."

"The pig asked if we had traffic lights in Ireland. I told him we didn't. It's a small place you know," Pat pointed out.

"I told him we're more intelligent, we don't need traffic lights to tell us when to cross the street in Ireland," he said with a grin on his face.

"I'm not going to pay the fucking ticket. It's my souvenir of L.A. The hell with them," Pat added as Mike nodded his head in agreement.

Ironically, their friend was picked up by the San Luis police after he staggered across the street against a red light.

"He didn't learn anything in L.A.," Pat said with a smile.

Pat, Mike the driver of the car and their jailed friend had met in New York three weeks earlier. They toured the southern states and were here on their way to San Francisco. Along the way they had a not-too-memorable stop in Texas.

Pat, the most talkative of the three, spoke briefly and heatedly about it.

"When we were in Texas the bastards said they were going to cut our hair if we didn't leave town. We left town," he said smoothing down his long blond hair.

It wasn't clear who the "bastards" were because the subject abruptly changed. That happened a lot during the conversation.

Pat noticed two police cars in the intersection and suggested they should leave. His friends agreed.

"We don't want to be hassled anymore. We're headed for San

Francisco tomorrow, if we can get our friend out of jail. We hope it will be a lot cooler up there."

With that the young man from County Cork, the man from Belfast and their silent friend from New York said goodbye and left to find their car and, hopefully, better times.

Their encounters with the law have made the Irish tourists wary. Talking with a group of students near the Cigar Factory they noticed that a number of police cars had passed by.

"We better get going," Pat said, "before we get in any more trouble." His friends agreed.

The students assured them that

nothing would happen. It was after two in the morning, one student explained, and the police were just getting ready to roll up the streets. Everyone laughed and the subject turned to women.

The Irishmen liked American women, especially the California women. "They're really beautiful," Pat added.

Someone pointed out that Bernadette Devlin, an Irish activist was in the country awhile ago trying to raise money. "She's not bad looking at all," he concluded.

"She's a fox," Pat said positively. "She's a really pretty lady. Wish I knew her."

"She's a bitch," Mike replied with a smirk on his face.

to the victim. Therefore one must understand the rapists to insure her safety.

The Rape Crisis Center is a dedicated service set aside for those victims of rape. Advocates are on call to provide companionship, information and any other such assistance desired by the victim.

Rape is a crime and should be dealt with as such; advocates of Rape Crisis will assist the victim in legal matters along with

medical matters. She is regarded in the utmost confidence.

The common assumption of all women is the lack of aggression will result in less harm and/or a better treatment; that is not so says Mrs. Bernhardt, an advocate to the center. "Become aggressive immediately and you might have a better chance of escape."

The center has strong conviction on how to behave under such circumstances; among the list are the following:

1. If you're home alone and someone knocks, say "I'll get it John." Never admit you are home alone.
2. Get to know your neighbors.
3. Always lock your car doors.
4. Have your key ready before you get to your car.
5. If you're in a crowd, yell, fire!, not help! People are likely to react more to danger to themselves than to you.
6. If you decide to escape take the shortest route and scream all the way.

These precautions may someday save you from being the victim of rape. Pamphlets, brochures and experienced speakers are provided by the center and will assist anyone through the hazards of rape.

The center has been working closely with the police, hospitals and legal services and has received great assistance. These people are here to assist not to dictate what should be done—you are the boss. When a victim calls the center advocates are on the phone giving any type of help they possibly can.

Until she tells them what to do there will be no calls to the police, or any such organized group—she is in command. A victim requesting to remain anonymous may choose to do so and no questions will be asked.

The main purpose is not who the victim is, but how can she be treated, mentally along with physically.

Rape is not by any means a "dead" or apprehended crime. The reason it is the most unreported crime is due to fear, guilt, or embarrassment. The Rape Crisis Center hopes it will be able to reduce if not diminish the horrifying crime by educating more and more women on preventative measures against rape.

Remember, rapists are not psychotics, but over 50 per cent of all rapists are known to their victims. For any further information dealing with rape call the hot line number at 544-6162, any of the volunteers will be ready to help.

CHEAP THRILLS RECORDS

San Luis Obispo's most unique record store, with the largest selection of records and tapes with the cheapest price. Largest selection of used tapes and records. Complete lines of blank tape and recording supplies. Tape decks and speakers, and much more.

AVATAR MUSIC

A small personal music store with the lowest prices in town. Guitars, banjos, mandolins, dulcimers, music books, expert lessons. —This week only to students 25 per cent to 50 per cent off any item, also two sets of strings for the price of one!

YELLOW SUBMARINE

San Luis Obispo's one and only Head Shop. Smoking accessories, underground comics, incense, large poster selections, T-shirts and transfers. Also, we have anything you may need for your smoking pleasure.

DOWN TO EARTH

And just around the corner at 1037 Osos, you'll find any style of jeans to fit your body. We carry Asmile, LAPD, Love'n'stuff and Faded Glory Jeans. We also have dresses, skirts & blouses in the latest styles. Come in and see us. 544-2900.

Feel hungry? Eat bugs!

Insects on the dinner table—bees, grasshoppers and termites in every course from soup to nuts—may be an answer to the worldwide problem of malnutrition and starvation.

At least that is the view of a Cal Poly senior in home economics. Carol Miller, 26, of Grover City is completing the final stages of her senior project, entitled "Introducing Insects into the American Diet." In her unique project Mrs. Miller has developed gourmet recipes using these three insects.

What is so unusual about eating bees and grasshoppers? Epicures have been chocolate coating them for years.

Mrs. Miller's thesis is unique in that it is a serious proposal to Americans, as well as those of less

affluent nations, to begin using insects in their everyday diets.

Says Mrs. Miller, "The main problem is the cultural aversion to eating insects. It seems to be indigenous to industrial societies. When most people think of eating insects, they think of it as a novelty or as being barbaric. They don't take it seriously."

In our society, Mrs. Miller says, we are taught from childhood that insects are useless nuisances. She says, "People think I'm kinda wacky for getting into this (study)."

Mrs. Miller, who now relies on insect dishes, admits: "Insects used to freak me out."

Four years ago, determined to rid herself of her aversion, she took an entomology course. She not only learned to respect the

little creepy-crawlies, but began to develop a strong interest in working with them. When it came time for her to choose a subject for her senior project, it seemed only natural to combine her interest with her home economics major: hence, her thesis on cooking with insects.

"Entomophagy", the eating of insects, is a new and relatively unexplored field. According to Mrs. Miller, there have been no in-depth studies done on cooking or eating insects, or any of the related nutritional aspects.

Mrs. Miller says that insects could very well have been America's original soul food as they were found in the diets of the Digger, Modoc and Pitt River Indian tribes. She says jokingly, "If people really want to get into the spirit of the bicentennial, a patriotic gesture would be to eat insects."

Why eat insects? Says Mrs. Miller, "Good nutrition is a matter of both the quality and quantity of the food supply. With insects, quality may be attainable with the least amount of quantity." While beef's protein, is only 15 to 20 per cent, termites are 40 percent protein, and grasshoppers are 60 per cent protein.

In addition to their nutritional advantages, insects have the benefit of being prolific and easily adaptable to almost any climate. Therefore, they could be cultivated wherever they are needed.

Mrs. Miller has specific reasons for choosing the three insects she worked with. Bees were chosen because they are readily available as they are raised commercially. Also, they are easily accessible from their hives.

She wanted to develop recipes for an insect that could be foraged easily. She chose termites, and then ironically had to resort to getting hers from an exterminator because she could not find any.

Grasshoppers were chosen not only because they are found abundantly throughout the U.S., but also because they can be purchased in markets.

Mrs. Miller says she purposely avoided the use of any carnivorous insects, such as flies, that feed off decaying animal carcasses. Since part of her project involved a taste-test panel of faculty and students, she said she wanted to avoid any negative feelings that these insects might generate.

Are there any non-edible insects? Mrs. Miller says one researcher told her to avoid stink bugs which he confirmed "taste like they smell." She also says that people who have allergic reactions to shellfish probably will be allergic to most insects.

Mrs. Miller, who will eat almost any insect, admits that some do have a bad aroma, taste or "mouth feel" when presented in their most commonly eaten forms. Her recipes attempt to disguise any of these undesirable qualities.

"I tried a pseudo-gourmet approach, developing recipes with wide appeal, general acceptance, and ease in preparation," she says. "It's important for people to think they're eating something special and, also, that they can prepare it themselves. With my recipes I was hoping to set a new pathway."

Insects were incorporated into already-existing recipes as a protein supplement. Mrs. Miller says she feels that is how they can most practically be used. "They can't be used as a total protein substitute in our diet. It's a little bit

Insects

(continued from page 18)

too far off. There's no way that people are going to accept insects when they can have a steak.

Mrs. Miller chose recipes that would involve every part of a full-course dinner—from appetizer to dessert. Among the delicacies presented to the Poly panel were: Sake-dipped bee wontons, termite rice pilaff, bee tempura, grasshopper bread (called "Jiminy bread" after Jiminy Cricket), and chocolate-covered bees marinated in orange liqueur.

Richard King, a temporary instructor in fruit science Spring Quarter, was one of the brave tasters. "The only thing I didn't like was the chocolate-covered bees. Say, do you know what happens when you eat bees? You break out in hives," he joked.

Says King, "The termite pilaff and bee wontons were very good."

Did he know what he was eating at the time? "Yes, that's the only way I would try it," he says.

The panel, comprised mostly of male faculty members, was served the delicacies in the graciously decorated living room of the home economics building. Mrs. Miller chose this comfortable setting because she wanted the tasters to be in as receptive and relaxed moods as possible.

Positive results came from the panel's experience. King says, "A lot of constructive comments were given (by panelists)—a lot of ways to present insects to the public in

an acceptable way. The tasters had a different opinion (more positive) toward eating insects afterwards."

Not yet completed, Mrs. Miller's project has already generated interest in the world of science. "Science Digest" magazine wants her to write an article for them.

She already has a firm offer from "Terra", the quarterly publication of the Natural History Museum in Los Angeles. She will not publish her senior project, but will write an historical approach to entomophagy for them.

In November, Mrs. Miller will make an oral presentation and demonstration of her recipes to the Lorquin Entomological Society in Los Angeles. She is hoping to receive a grant from them to continue research toward a master's degree.

Poly's canine problem is a bitch

by MIKE CONWAY

"Man's best friend." Canis familiaris. The dog.

Is this school going to the dogs? Literally. Man's best friend can be found at school every day, all over campus. And they can be found creating problems for people.

The problems range from barking dogs disturbing classes and defecating in hallways to biting people and attacking sheep in the nearby pastures.

But the problem isn't easily understood in terms of numbers

because there aren't any precise figures, only estimates at best. No one knows exactly how many dogs there are on campus. No one knows how much damage dogs do.

James Landreth, director of business affairs and a dog owner, estimates there are "between 10 and 50 dogs on campus" at the peak hours of school.

"With 14,000 students that's a small number of dogs," he said. However, he said if every student who owned a dog brought it to

school the situation would be out of hand.

Landreth said dogs frequently enter buildings "and do their duty," irritating the janitors who have to clean up after them.

Dennis Ruthenbeck, the University Union building manager, also tells of dogs doing their duty on floors, furniture, posts and walls in the Union. He said it happens about twice a month.

While there aren't any guesses as to how many dogs get into buildings, it is thought to be small. The majority of dogs on

(continued from page 19)

campus are outside, where they can create trouble for the groundsworkers.

The Health Center sees dog bite cases "with a degree of regularity," said Dr. Billy Mounts, director. Although the center doesn't keep figures on the number of bites, he said there are "several bites a month." Mounts pointed out that "a lot of these bites happen off campus."

It is easy to find a dog to interview on campus but it's a lot harder to find a dog owner to ask why they bring their dogs to school.

Jennifer Riehl brings her Irish Setter to school "because I ride my bike to school and it's good exercise for her to run along side. She has a hip displacement."

"I wouldn't bring her here in the fall because there's too many people here. But now there's not very many," she said.

"I bring my dog because she likes to come here," said Kathy Fisher. She's friendly and doesn't start fights or anything. If I didn't bring her, she would stay at home all alone.

"I don't think people should bring their dogs here if they're going to fight and cause trouble and dig up flowers," she added.

Dogs do the most damage, in dollar value, out at the Sheep Unit. In July dogs killed 15 sheep out in a field before the

offending dogs were shot. James Jacobs, the advisor for the Sheep Unit, said the costs for replacing the sheep run high.

Jacobs said the 15 purebred sheep sell for \$200 to \$250 a head. He also said there was a \$3500 ram in the same field as the attacked sheep, "but luckily wasn't attacked."

Another problem with dogs is they damage sheep to a point where they are unsaleable, he said. Jacobs estimated the losses for these sheep "in the thousands of dollars."

Jacobs said any dog seen chasing sheep can be shot, which is often the case. While reluctant to give precise figures on the number of dogs shot in a year Jacobs did say it was at least "four or five."

He also said that dog owners can be charged two and a half times the market value of the sheep as assessed by a county agent or a sheep breeder. However, since most dogs found don't have any license it is almost impossible to trace the owner.

There are at present leash laws which prohibit dogs from running loose, however, enforcement is complicated.

Chief Security Officer George Cockriel said enforcement of the leash law is the county's job and if one of his officers got bitten by a dog or some other problem developed "all hell could break

loose" because the department overstepped its jurisdiction.

Bill Tidwell, supervisor of animal regulation sees another problem area. His men will not come on campus to pick up any dogs unless accompanied by a security officer.

"We've gone in there (to Poly) to pick up dogs and kids have thrown paint, and they've broken doors and glass on our trucks," he said.

However, when the animal regulation people do pick up a dog it will cost the owner \$10 to get the dog back, if it is licensed and has its rabies shots. The second time a dog is picked up it will cost the owner \$25 and the third time will cost \$50. If the dog should be picked up a fourth time "the owner has to prove they can be responsible for the dog," Tidwell said.

At Poly the administration currently is reviewing the dog policy. Landreth is charged with formulating the new policy. He is considering three possible solutions to the problem.

The first solution would be to create a student patrol which would go around campus informing students of the leash law and asking them to comply with the law. If a student didn't comply, the student would be given a notice to appear before David Ciano, director of judicial affairs, for possible disciplinary action.

A second alternative would be to have the offending dogs picked up and held in a kennel until the student came to claim the dog. With a second violation, however, the dog would be sent to the pound.

The third possibility is to simply ban all dogs from campus unless they are needed on campus, as sheep dogs are.

People say "It's a dog's life" when they're describing easy living, but for dogs at Poly life may get a little harder.

Michelin costs less in the long run. The very long run.

Backed by Michelin's Warranty* for 40,000 miles of tread wear. (Many owners get much more.) Puncture resistant Michelins give precise steering control, and smooth driving comfort. Stop in and start saving now.

40,000 MILE WARRANTY

Making peace through yoga

photo by TONY HERTZ

Yoga enthusiast Sandy Bristly.

Pretending to be a seagull gliding lazily over a tranquil sea or a giant Hershey bar slowly melting under the summer sun was serious work for some this past summer.

In a darkened dance studio, silent except for the sounds of deep breathing and the soothing strains of Debussy's "Clair de Lune", students of Hatha yoga twice weekly lulled by these and other simple devices into an almost self-hypnotic state.

Not a likely setting for a college course—but then Sonya Murray's yoga is no ordinary class.

Hatha yoga is an ancient form of mental and physical discipline that can produce amazing results.

Class schedules for a year have listed the course as experimental, but it is still alive and well in Crandall Gym.

According to the course's originator and resident guru, Mrs. Murray, the popularity of the class has grown tremendously among the students. The demand was so great this summer that an additional section had to be opened.

Says Mrs. Murray, "I could teach it all day long and still not reach all the interested students."

Mrs. Murray is an enthusiastic five-year devotee of Hatha yoga. A natural beauty, lithe and sun-bronzed, she is a walking advertisement for yoga. She embodies the virtues promised by yogis to all who assume their postures: fitness, vitality, confidence and poise.

A former professional singer and model, Mrs. Murray found the yoga system of meditations and exercises particularly helpful in alleviating nervousness during her performance.

"Yoga is all very logical—just good common sense, but some people have misconceptions about it," says Mrs. Murray. Among the incorrect notions the uninformed have are: that it is a religion; that it is a form of theatrical acrobatics, that it means kissing cobras, walking on burning coals, or sleeping on beds of nails; that it involves mysticism, hypnotism, or asceticism; that it requires sitting in tortuous postures while staring into the sun; or that it means holding one's breath or stopping one's heart for periods of time.

What then is yoga? Says Mrs. Murray, "Yoga is a way of life."

Hatha yoga, which is the physical part of the discipline has two main objectives: (1) to cultivate the natural beauty of the body and attain a high state of health, and (2) to awaken a power lying dormant in the individual

and use it to attain self-realization.

The course as taught here, involves brief meditations and a series of balanced postures, called "asanas", interspersed with periods of total rest and relaxation.

Herein lies the primary goal of the course: to teach the student how to relieve his body and mind of the tensions and anxieties that inevitable result from his frenetic 20th Century lifestyle.

The emphasis is on the individual as an integrated mind, body, emotions and spirit. "Yoga", a Sanskrit word, means "union" or "joining together."

Yogis claim there is a subtle life-giving element, known as "prana" or "life force", in the air we breathe. The more prana is one's body, the more alive a person is. Therefore, deep

Monday, September 23, 1975 Page 21

diaphragmatic breathing is taught from the outset. This is a relaxing technique that does not come naturally to the majority of people.

"The only disadvantage I can see is that yoga doesn't provide a good aerobic workout," she says. "It does not stimulate the heart and lungs to speed up." Mrs. Murray, therefore, encourages her students to supplement the program with some form of strenuous exercise, such as jogging, biking, or swimming.

A confirmed positive thinker, Mrs. Murray leaves her students in a happy frame of mind to face the rest of each day:

"Place a big plus (positive thought) in front of you and a happy smile on your face. You are unique—you are someone special. Have a super day," she says with a radiant smile.

Accreditation renewed here

General accreditation of Cal Poly as a four-year degree-granting institution has been renewed by the Western Association of Schools and Colleges.

The WASC is the authorized accrediting commission for senior colleges and universities in California, Hawaii and Guam. Its general accreditation covers all of the 52 bachelors degree programs here.

In the words of Dr. David Grant, Associate Dean of Academic Planning, "If you want to finish (undergraduate work) elsewhere or go to graduate school and you don't come from an accredited institution, you're dead."

The recent review of this campus, by two representatives of the association, was a quick one. They met in the course of a day with representatives from the various departments, the administration and the A.S.I. and took their findings to a WASC meeting in Burlingame.

The next review, scheduled for 1979-80, will be more extensive.

At the end of each decade a team of 8-10 people from the association descends on Cal Poly for several days and documents everything in sight. Each member

of the team is a specialist in a particular academic area.

According to Dr. Grant, there have been philosophical agreements in the past between the reviewers and departments here.

"Accreditation is supposed to be in terms of the goals of the institution" Grant continued, "but it's hard for them to understand the vocational direction of this campus."

It's The Best There is.

Swensen's sit-down parlors are warmly reminiscent of a gentler period of tiffany and oak. Lazy-day fans and marble-topped tables. Phosphates over ice and tingling sarsaparilla and memorable ice cream desserts built for two.

Ag has new plan

Cal Poly's School of Agriculture begins a new bachelor's degree program this fall which will permit students to become ag teachers in four years.

With teaching jobs hard to find, this could open new educational doors for graduates from this university.

The program, recently approved, is offered under provisions the Ryan Act.

The act was introduced in 1972 and after a three-year grace-period will become effective during the 1975-76 academic year.

The new addition will give students a chance to complete their degree work in a four-year term instead of the previous five-year term. With a variety of seven taxonomies from which the Federal Government listed for its concentrations, the students may choose the field in which he would like to specialize. Included in these seven concentrations are productions, plant production, agricultural products and processing, agricultural supplies and services, agricultural mechanics, ornamental horticulture and agricultural resources management.

Along with one of the seven concentrations the student is required as part of the curriculum to enroll in education courses.

Accreditation for Landscape

If you've noticed some Landscape Architecture students at Cal Poly walking around with their heads a little higher in the air, there's a good reason for it.

The Landscape Architecture program at Cal Poly has been receiving a steady dosage of national attention recently, all of it coming with the program being in existence for only two years.

Last Summer, the School of Architecture and Environmental Design received the news from the American Society of Landscape Architecture that the program has been accredited by that organization, marking the first time accreditation has been given to a school in existence for less than three years. The usual accreditation time is about six years.

Although he had high praise for the Landscape program, George J. Hasslein, dean of the School of Architecture and Environmental Design, admitted that "the accreditation was quite a surprise."

The dean said the School had trouble getting a good faculty together at first because graduates are in great demand. But now they have been able to put "a little faculty" together.

"Their enthusiasm, their dedication to work, and their identification with the students are also in the program's favor," he said.

The accreditation team stressed, however, that the School should find some more experienced faculty to combine with the younger members to make a more balanced staff.

"Accreditation visits are indeed traumatic," explained the dean. Visits extend from two to four days with a team of specialists closely examining every aspect of the School's program.

"Faculty salaries, the space that each student has, students and faculty loads, your library, your slide library, the morale of faculty and students—nothing escapes their attention."

Therefore, preparing for a visit is no easy task—and the School has had three visits this year.

The Engineering Council for Professional Development visited the Cal Poly Architecture Engineering program earlier in the year.

Subsequently, the Master of Science program in architecture was examined by the National Architectural Accrediting Board.

Also of note for the Landscape program was the National Student Design Competition sponsored by the American Institute of Landscape Architects at Louisiana State University in which a team of 16 Cal Poly students won a major share of the awards.

Hasslein said the main problem the School faces right now, however, is its excessive number of applicants.

"There are approximately 1,140 applicants for every 350 openings," Hasslein explained, and so the Chancellor's office has declared the School impacted, which means applicants with no other place to go are being turned away.

Therefore the School must screen its applicants through a process known as selective admissions in which all applicants are interviewed and tested.

The "master plan", as Hasslein calls it, calls for the School of Architecture and Environmental Design to take over Dexter Library when a new library is built. That should pave the way for an additional 500 architecture students.

The dean said the new building will also bring faculty offices together to an extent and make it

Mozart returns for fifth year

Cal Poly had an added touch this past summer—the Mozart Festival.

It was the fifth year in a row for the county's festival, which was staged from July 29 to August 2. Most of the 11 concerts were held in the Cal Poly Theatre. One of the unique aspects of the festival was the Ear-Opener Concert—which was a varied presentation

of Mozart's music and was designed for the inexperienced listener.

Although the concerts were centered around the works of Mozart, music by Schumann, Rachmaninoff, Beethoven and Haydn was also presented.

The festival has achieved wide acclaim throughout the West and has attracted performers from various parts of the country.

Wilson new associate dean of grad studies

A former member of Cal Poly's overseas teaching team has been appointed associate dean of graduate studies.

Dr. Malcolm W. Wilson, has been a faculty member in the Education Department since 1968. He will begin work with the Graduate Studies Committee and with graduate program advisers in coordinating the 14 master's degree programs offered here.

As a member of the university's teaching team, Wilson spent 27 months during 1969 through 1971 in Africa. He was the director of short courses for primary school headmasters at the combined University of Botswana, Lesotho and Swaziland.

Wilson worked with three groups of headmasters who came to Gaborone, Botswana, for a one month intensive course designed to update primary education. He also made follow-up visits to the villages to work with individual headmasters.

Wilson received his bachelor's and master's degrees from Western State College in Gunnison, Colo. In 1973 he completed study for his doctor's degree from the University of Arizona.

Before joining the Cal Poly faculty, Wilson taught at the University of Arizona. He also taught at public schools in Colorado, Florida and Arizona.

She sits alone in heavy thought amidst the beautiful surroundings of trees and plants in the Engineering West patio. The patio is a favorite among some students for its areas of solitude within the tropical setting.

The four foot tall bust was brought here seven years ago from the Palace of Fine Arts in San Francisco through Dean Hasslein of the Architecture Department. Originally she was made by architect Bernard Maybeck who also designed the Palace of Fine Arts in 1915. As explained by Maybeck the Palace is a concept based on "an old Roman ruin which 2000 years before was the center of action and full of life, and now is partly overgrown with bushes and trees."

The wood and stucco Palace was doomed for deterioration after World War II. An entire reconstruction came in 1959 using mainly concrete. The once full-bodied figure of the woman was restored by Tom Johnson of the Architecture Department. Johnson used silica seal and treated her with linseed oil.

Decision to show porno movies in hands of Films Committee

Choosing 11 motion pictures out of a list of 7,000 is no small chore, but that is the responsibility of the ASI Films Committee.

The selection of films passes through three filtering processes. The officers of the Films Committee first choose 100 out of the 7,000 films offered each quarter by various film industries. The officers then select 35 films to be sent to the committee where a vote is cast to determine which films will be shown in the following quarter. Those films having the highest number of votes will then be ordered.

The absence of X-rated films has been a point of interest among students. Chairman Jim Fauset said because of the massive amounts of films to choose from and the limited number of nights available, X-rated films have not received enough votes by the committee members to merit showing one. However, Fauset went on to say that should "...an X-rated film get the votes, I'm going to follow through with it."

Asked whether he felt such a decision would create problems from the administration, Fauset replied, "I don't foresee any problems from the administration should we choose any X-rated films, because it would be the choice of the entire committee."

The ASI Films Committee has an annual budget of \$15,688. However, it is operated like any business and is designed to make an annual profit of \$2,162 or an end of year income of \$17,850. As a result of the need to make a profit and because the fee of current films is rising, the majority

of pictures shown this quarter will be raised to a dollar.

The number of films shown each quarter is dependent solely on the availability of facilities. Only Chumash Auditorium has the size and other equipment needed to show films, and it is in great demand by every club, committee and group on campus.

Another determining factor for the choice of movies is the price. The "Godfather II" costs the committee \$1,000 which is about the top price of films for rent. The average price for films rented is about \$350 to \$500 for such movies as "Gone With the Wind", "Deliverance", and "Camelot".

Mediocrity marks new rock trends

by BLAIR HELSING

In this, a year which has yielded an unusually high number of major musical surprises and disappointments, it seems both natural and somewhat necessary to examine (from an admittedly biased point of view—you'll surely have your own choices of the year's good, bad and ugly) the state of rock in 1978.

Several large trends have arisen, many of which have resurfaced after more than a decade of (depending on the trend in question) blessed or unfortunate submergence. As large-scale phenomena usually do, this set has smothered a lot of material that's more than worthy of reaching the public's ears, while creating an artificial craving in our collective eardrum for more of the currently dominating pseudosoul that has become all but synonymous with Top 40 radio.

The ruling status of groups like AWB, Bazuka, the L.A. Express and a considerable number of others is a disturbing indication of the depths to which rock (or perhaps its audience) has sunk.

Instrumental funk, or "disco" music, has come close to being the only Top 40 radio fare available—which was, the case, you'll remember, in 1961 and '62, when the Ventures, the Surfari's, and Dick Dale and the Deltones became the backbone of record hops in high school gymnasiums across the country.

Lack of lyrics indicates a certain mindlessness that has no place in the music meant to fuel a generation (once upon a time),

and we have yet to see any form of rescue from bands as fine as the Beach Boys, the Fab Four or the Stones.

When rock began its current so-called "downhill slide" in the early 70's many watchers of the form predicted that black music, particularly jazz, would take on increasing importance as the decade continued. So it has.

Jazz today is perhaps more widely heard than anyone would have thought possible even three years ago. The typical radio playlist of the last six months has often included more black artists than white.

But even as such valuable artists as Stevie Wonder, Stanley Clarke, and Chick Corea have come to the fore, they've been accompanied by an equal or even larger amount of schlock soul and cheap jazz. Depressingly, there's now as much uninspiring black music on the market as white, and we find ourselves in a shared mire created by record companies releasing far too much product in hopes of beating the odds and getting a hit.

While the majority of radio stations and record buyers have favored easily-digested (or at least heard) fare for the last 36 months or more, occasionally they'll turn away from their BTO or Elton John to savor the infrequent gems that occasionally nudge their way in among the ordinary rocks. Janis Ian and Phoebe Snow have both been so favored in recent weeks (joining Joni Mitchell), and 10cc has finally won deserved acclaim after three albums and individual careers spanning more than a decade.

Radio music directors willing to take chances and record companies in league with Lady Luck have made these successes possible (before the public picked up on them enough to sustain them), and welcome ones they are. Commercially successful music, as frequently unmovable as it is, still has its moments, but they're few and far between compared to the pure inspiration coming from AM radio from 1964-1969. Remember KFRC or KRLA, say in 1966? Adolescent heaven, with one progression after another providing us with music to live, rather than jive by.

What about those of us who don't take our musical nourishment from the radio, or at least not AM? What are we feeding on? If nothing else, the Seventies have produced and catered to a commercial FM radio market (the 18-35er's). The Doobies, Dave Mason, Robin Trower, Fleetwood Mac, Gordon Lightfoot, and Eagles (to name a few) are succeeding well, indeed very

well, commercially, while garnering little or no AM airplay (in most cases) and after minimal FM play in some areas of the country.

Progressive FM radio, born in New York and on the West Coast, opened up this market which barely existed seven or eight years ago.

Today, in many ways it's parallel to the AM market, with a relatively small number of artists (such as the above-named) dominating airtime (this being due to the need for stations to finish high in the ratings race by playing what their audience "wants" to hear).

This situation has led to a sizeable pack of highly capable and appealing artists being lost beneath the thin crust of commercial success.

Numerous European groups and many domestic bands are lost to all but a few dedicated followers of non-commercial fashion, who watch carefully for the new releases of bands such as Genesis, Passport, Gently Giant, Thin Lizzy, and Caravan as well as import-only groups including Omega and Alquin.

A majority of the artists on the Island Label are followed by these people. Among them—Sparky, Eno, John Cale, The Sutherland Brothers and Quiver, and Robert Palmer.

Relatively few of these aesthetically successful bands and individuals manage to reach into the trade magazines' charts, but an occasional Aerosmith or Roxy Music will rise to the borderline or even beyond, and these are encouraging signs.

It appears now that rock as a whole genre will never again regain the unity of purpose and dedication to progress that is exhibited in its infancy and developing years, so when the artists that are keeping the field open and widening (however slowly) can reap some acclaim and success, it proves that the music is at least alive and that someone in the audience still cares what happens to it.

Perhaps that most pleasant surprise these past six months has been the reinstatement near the front lines of some once-forsaken figures from "the old days".

Dylan and the Stones, particularly, have become a renewed source of inspiration—the former with a brilliantly-crafted album and the latter with a tour which must rank as one of the highlights of the last three years.

And of course, our memories of their former glories have been refreshed with the release of "The Basement Tapes" and "Metamorphosis"—landmark albums of their kind. Stephen Stills, too, has weathered well and come back strong.

The overall diagnosis from this corner is guarded; it's pretty difficult, as always, to predict the directions this music will take from point X to point Y. A bit dazed and confused, perhaps, but far from being knocked out, rock and roll walks on in search of a new identity, with yet enough strength and charisma to keep us all tagging along beside it.

New Life Science

The proposed Life Science Building.

Sewer car Proposed building in budget hits it big

In today's environment-conscious world, many suggestions have been made on replacements for that infamous gas-guzzler, the internal combustion engine.

An idea, however, by an engineering student at Cal Poly has resulted in national exposure for a campus test of the feasibility of sewer gas as an alternate energy source.

The concept, a sewer gas mini bus system, was submitted to Atlantic Richfield Co. by James M. Bready and Dr. William B. Stine, a student and a faculty member of Cal Poly's School of Engineering and Technology.

It was featured nationally in an ARCO advertising campaign dealing with alternative energy sources for mass transportation systems.

The full-page advertisement appeared during the first week of June in 49 newspapers throughout the country, including the New York Times.

Cal Poly engineering students have been experimenting with the possibility of sewer gas as an energy source since 1975. The school's 1986 Cadillac Fleetwood limousine powered with sewer gas drew national attention when it participated in a 500-mile clean air rally in 1974 and again in April of this year. The students are already preparing for the 1976 rally.

A \$8.25 million dollar Life Science building for this campus has been approved in Sacramento.

Construction of the new structure is slated to begin in early spring 1978, according to Executive Dean E. Douglas Gerard.

Plans for the facility passed the California Senate and Assembly last month and were approved by Governor Edmund G. Brown Monday night, Gerard said. It will be funded by the 1975-76 Capital Outlay Budget.

As indicated in the long-range master plan for Cal Poly, the new building will be built just east of Science North in what is now a temporary faculty parking lot. It will be constructed at a right angle to Science North and the two buildings will be connected by an indoor bridge, according to Gerard.

The structure was designed by Kruger, Bensen and Ziener, a

Santa Barbara architecture firm. It will contain 19 laboratories for biological science, three lecture classrooms, and 41 faculty office spaces with related administrative and clerical support space. Gerard estimated it will accommodate 729 students at a time, including 524 in lecture areas and 205 in laboratory areas. It will include 74,000 sq. ft. of floor space and cover 1.2 acres.

"Construction will take about two years," Gerard said. "Maybe 18 months if things go well. We hope to have it completed by January, 1978."

Although the Life Science Building was not included in the capital outlay construction funds originally approved by Governor Brown for the 1975-76 budget, it was later included as an augmentation request and had the highest priority in the category of facilities needed for enrollment as submitted by the Board of

Trustees of the California State Universities and Colleges.

Gerard said the next new edifice planned for campus is a faculty office building. \$75,000 has been spent for working drawings of such a structure but construction funds were blue-penciled by the governor from this year's budget.

A 4.25 million dollar life science building for Cal State Long Beach was approved, however.

Courts see the lights

Students, faculty and staff of Cal Poly may now play tennis into the wee hours, thanks to the installation of lights at the tennis courts south of the Physical Education Building.

The lighting project was financed with monies from the Dormitory Revenue Fund and will be jointly administered by the Housing and Physical Education departments.

Trail for the handicapped

by SUSAN RIFE

The Pino Alto Trail.

photo by SUSAN RIFE

Gordon Elliot is more involved with his senior project than most people ever get involved with any project at all.

He is building a trail adapted for use by the handicapped.

Elliot himself isn't handicapped. He has both his arms and legs, vision aided by glasses, and his hearing is fine, too. Why is he involved in building a trail for the handicapped?

Because he cares about other people.

Elliot has a deep love for the outdoors and he wants to share it with everyone—including those who wouldn't normally have the chance to experience the wonder of the great outdoors except from the inside of a car or a stationary vista point.

He calls himself an interpreter of the forest. And he does a pretty fair job of translating the forest's language into something all of us can understand.

Elliot's project is named Pino Alto—Spanish for high pine. Located on Figueroa Mountain in the Los Padres National Forest, the trail Elliot has built is near the top of Figueroa and commands an amazingly beautiful view of the Santa Ynez Valley north of Santa Barbara.

In the midst of the forest, surrounded by Ponderosa pines and Douglas firs, the trail is a half-mile of easy walking. The trail is specially adapted for easy use by those on crutches or in wheel chairs.

Scattered along the trail at more or less regular intervals are 14 points of interest, marked with numbered posts which correspond to descriptive paragraphs in a brochure available at the beginning of the trail.

Elliot began his project in January when Don McGuigan of the U.S. Forest Service approached Cal Poly with a number of projects for seniors to take within the Los Padres National Forest. Elliot, a Natural Resources Management major, was immediately intrigued with the name Pino Alto and talked to McGuigan about taking the project.

McGuigan told Elliot that the project would be a lot of work. The trail had been built originally in 1972 by the Los Prietos Youth Conservation Corps with the objective of use for the handicapped in mind, but the project had been abandoned, and nothing had been done with it for three years.

The Conservation Corps had rototilled cement into the top

Journalism selects department head

Dr. Robert Hudson of East Lansing, Mich. has been chosen as head of the Cal Poly Journalism Department.

Hudson will succeed John Healey, who asked several months ago to be returned to fulltime teaching duties. Healey, who joined the faculty in 1947, has been head of the department since 1967.

Currently a member of the School of Journalism faculty at

Michigan State University, Hudson will assume his duties here on Sept. 1. He was chosen out of 132 applicants.

Hudson, 42, is a graduate of Indiana University, University of Oregon, and University of Minnesota, where he earned his Doctor of Philosophy Degree in mass communication in 1970.

In addition to his teaching assignments at Michigan State

over the past eight years, he has been assistant chairman of the School of Journalism for the past two years and acting assistant dean of the College of Communications.

Hudson also served as chairman of the School of Journalism undergraduate affairs committee and chairman of the College of Communications' advisory committee.

Trail plan blazes path in forest

(continued from page 29)

several inches of soil to make a hard surface easily negotiated on crutches or in a wheelchair. But since the trail was built in 1972, it was not maintained and a substantial amount of reconstruction, maintenance and adaption was needed.

"They didn't take two things into consideration when the trail was built," Elliot said. "Maintenance, and could the handicapped actually use the trail?"

Part of the trail was too steep for wheelchairs and had to be rerouted. And the whole trail was buried beneath three years of debris. Elliot spent the last six months working on the project, and expects to complete it on another six weeks—hopefully in August.

"I started with the wildlife. There are plenty of birds in the area, unique to the Los Padres area. So I had an artist come in and draw some sketches and cartoons of the wildlife in the area." Some of these drawings Elliot has incorporated into the brochure.

Elliot said, "Then I asked myself, what do I have in the way

of trees? And then I set a theme: a tree's survival in the forest."

After selecting the theme, Elliot set to work on both the brochure and the trail.

"There wasn't much rerouting of the trail, but there was a lot of reconstruction. Then I set about developing points of observation in keeping with the theme."

Elliot selected the 14 points along the trail:

Elliot had pages and pages of material noted down about the points of observation, and took the material to Charles Strong of the English Department here for rewriting and condensing into paragraph format for the brochure.

The trail is designed to be self-guided—that is, the user directs himself without a trail guide. The brochures are available from a dispenser at the beginning of the trail, designed for easy access by those in wheelchairs.

"I designed the dispenser so that someone in a wheelchair could just wheel up alongside it and pull a brochure out. The brochures are folded especially so that a folded edge leads and they

come easily out of the dispenser rather than crumpling up," Elliot said.

The dispenser, not yet installed, is part of a three-panel sign at the parking area at the head of the trail. The sign shows the actual trail, the overall area, and information about the trail and what the walker can expect from it.

In selecting the points along the trail to interpret, Elliot has tried to relate the points to their niches in the environment. He had to be selective about which things to point out. But the things not interpreted in the brochure are as thought-provoking as those included.

The spacing of the points was carefully planned by Elliot as well.

"The posts have to be close together to keep the interest," he said. "If one is too far from the last one, you start to wonder what happened and lose interest."

Elliot has incorporated versatility into the trail too. The points of interest can be moved to correspond to other things.

"In ten years another interpreter may be here and want to change things some. There's plenty of versatility built into the trail," he said.

Natural log benches are spaced at intervals along the trail as rest points, and off on its own cul de sac is the classroom, an area of benches for use by teachers and classrooms as a place to study the sights, sounds and wildlife of the forest.

The posts along the trail deal primarily with the trees of the area, telling of overcrowding in the forest and the fight for survival, the toll taken by heavy snowfalls on young trees, the natural cooling effect beneath an oak's canopy, the effect of lightning on a tree and how diseases can infect trees as they do people.

Even though Elliot was graduated from Poly in June and is now working on his Master's Degree in International Agriculture, he won't be abandoning the project.

"This project has become a way of life for me. It means more to me than most projects mean to senior," he says earnestly.

HEP finds a home; stays at Palm Royal

After a close brush with death on the Cal Poly campus, the High School Equivalency Program (HEP) has had a change of fortune.

Two recent developments have apparently assured continuation of the educational opportunities for children of migrant and seasonal farm worker families here.

The program looked as though it was headed for certain extinction after four years of operation here.

The program, which was transferred here from the San Diego State campus because of the abundance of facilities Cal Poly had to offer, was in danger of being eliminated due to a shortage of space.

The need to find new facilities for HEP became apparent when Cal Poly sought permission from the Board of Trustees of the State University and Colleges to locate 15 trailers on campus next year to accommodate the faculty and staff now housed in Tenaya Hall.

Due to increasing enrollment, it was announced that Tenaya will return to use as a student dormitory. Trustee policy requires that all on-campus space be used before they'll approve any temporary facilities.

In November, 1974, HEP was informed that their existing campus facilities in the Air Conditioning Auditorium would have to be converted for regular instructional use.

Robert J. McConnon, director of the Office of the U.S. Department of Labor, which sponsors HEP, advised Cal Poly that the program could not be moved to another campus and indicated that it would have to be discontinued if Cal Poly could not accommodate the program after July 1.

The trustees of the Cuesta Community College District came to the rescue of HEP with an offer of two vacant classrooms. The Department of Labor indicated that this move would be acceptable although the problem of where to house the program's participants was still unsettled.

The availability of additional space at the apartment complex enables the continuation of the program without the additional cost of transporting students to the Cuesta campus plus the renovation of the classrooms there, according to Al Amaral, executive director of the Cal Poly

Foundation which administers HEP.

"It will also make it possible to provide housing for participants, as well as classrooms and offices for teachers and administrators for the program, in a single location and be in closer proximity to the university's instructional resources," Amaral said.

The HEP program assists migrant and seasonal farm workers from 17 to 24 years of age to successfully complete the General Educational Development (GED) Examinations. It also helps to place them in jobs, job-training programs or in post-secondary education.

IN THE MADONNA PLAZA

Recycling in SLO-The Creamery

(continued from page 8)

Foremost owned the structure and was unwilling to part with just one part of it. The men then considered using the other buildings for warehouse storage but found out the area was zoned for commercial use only. "We found this out by looking for a place for ourselves for our restaurant. We looked around and saw there weren't any shopping places available," explains Korelich. Economic reasons, not just aesthetic, dictated their plans, he says.

After receiving a loan from the Bank of America in Los Angeles, the pair applied for a building permit. Then, says Korelich, they ran into some resistance to their plans from the city planning department.

"They thought it was a bunch of old buildings that couldn't be fixed up," claims Korelich. "They made it evident they would struggle with us on our plans. But, we worked on the plans for six months before we finally got the plans approved."

City planning director, Rob Strong, 36, who has worked for planning departments in Tulare and Walnut Creek, sees things a little differently.

"Problems are more complex in recycling old buildings than in the building of new ones. It is the desire of city planners to facilitate re-converting old buildings, such as in the case of the Creamery," he claims.

Korelich, Swift and the Creamery's shop owners feel that the Creamery fits ideally the concept of the low-keyed, eye pleasing shopping center that the city wants to have more of.

Korelich, who considers himself an architect first and a developer second, looks around at the Mission Plaza with its array of open, green lawns and mixture of shops and eating places and expresses the desire for more of the same.

Evidently, the city agrees. An indication that the city is interested in continued development of the downtown are plans for extending the Mission Plaza to the Creamery, Strong says.

The block between the Creamery and the Plaza is under study by the city for acquisition and is part of the capital improvement plan the city will implement in the next two years. "This will reinforce the concept of the

city general plan, which envisions these type of shopping centers," he points out.

With these plans, the east side of Mission Creek could be for commercial use and the west side for cultural use.

Not only are words like "character" and "charm" used when describing this effort to make something useful out of something old but the phrase "Big family unit" is even used by one shop owner.

Sally Botkin, 21, and owner of Animal Crackers, employs that phrase when she talks about the feeling the shop owners have for one another and Korelich and Swift.

"We have a Creamery Tenant's Association and we meet and hash out our internal hassles. Jim and John are there and we look on it as a kind of Momma and Poppa set-up," she says.

Ms. Botkin, a former graphic arts student at Poly, is a novice in the business world but says "there's a lot of pregnant women out there who want to look nice" and frequent her store's offerings of the latest in maternity clothing. An added feature to the store soon will be a bird named Crackers.

Other members of the "family unit" report that business is brisk.

Foods for the Family is another local business that moved because it wanted room to grow and it offers a wide selection of natural foods, including wild honey, seeds, nuts, hard tack, toasted corn and natural cosmetics.

Sound City is another business that needed room to expand and offers its line of retail distribution of stereo components, citizens band radio equipment and records.

The Kitchen Shop is a newcomer to the local scene and it has a wide range of cooking gadgets, utensils, woks, baking supplies, Ho Yang aluminum cookware, baskets, table cloths and cookbooks.

Local handmade planters, clocks, batiks and Escher prints are featured at the store with a definitely woody atmosphere, Country Creations.

The nautically minded can revel in the brass, wood, and glass nautical specialties that the Crow's Nest offers. Owner Jim Gall says his is a totally new shop that is for someone who has everything.

The largest amount of shop space is taken up by the Yarn Barn which is true to its name. Its high ceilings enclose an offering of yarn, cords, twine, crewel, macrame and needlepoint.

Rock Island Leather was another store that needed room to grow and it offers a new line of all leather clothing, including coats, jackets, pants, and swimwear, as well as hats, purses, belts, travel bags, sandals and bracelets.

Old time photos and antique frames are offered at Dave Ritchie Photography, as well as photo finishing, photo restoration,

heritage family albums, outdoor and indoor portraits and passport photos.

Right next door, The Viewpoint Gallery, a collection of paintings, prints, and frames, many of them by local artists.

Shapson's Sunrise House has branched out from Arroyo Grande and offers its unique handcrafted gifts and toys.

Special waterbeds are available at Flotation Sleep and maybe you can enjoy the beds even more while playing a game obtained from the Executive Playpen,

which has numerous thought-provoking games for adults.

After all that shopping, plenty of food is available. The Pepper Tree offers hotbrau sandwiches that include a choice of beef, ham, turkey and a soup of the day. Ace's Bar-b-Que is a fast food establishment featuring spare ribs and chicken.

And the idea that got this whole thing rolling in the first place, the Mexican Restaurant? Well, it exists, in the form of Tortilla Flats. A wide sampling of Mexican food is offered for both lunch and dinner time consumption.

Push your car into the Shade

by LYNN JENNINGS

Auto repairs and maintenance don't have to cost an arm and a leg, especially if you do it yourself.

No longer do apartment-dwellers need to worry about the landlord screaming when they change their oil on his parking lot.

At last there is a place for amateur mechanics to tinker with their autos, without the frustration of not having the right tool at the right time.

The Shade Tree Auto Hobby Center at 138 South St. now offers a place for beginners and pros to work on their cars for a small fee, with access to practically any tool imaginable.

Convenience and thrift are the reasons owner Bill Kirkpatrick opened such a shop in San Luis Obispo.

A charge of \$4 per hour covers the cost of a stall with a complete set of tools, and access to such items as a honer, torque wrench, engine hoist, manuals for most popular cars, grease gun, parts, cleaning tank, floor jacks and body tools.

Two do-it-yourselfers at the Shade Tree Hobby Center

photo by CHRIS VAN RY

Although it is best to get all the parts beforehand, Kirkpatrick says, "Most of the time we can get parts late at nite and Sundays." He adds that the local merchants have been very cooperative.

To make his shop as convenient as possible to the customers, Kirkpatrick helps locate parts and get machine work done. He also makes parts-runs every hour on weekends if necessary. There is no extra fee for overnite storage.

He also carries points, plugs, condensers and caps for foreign and domestic cars, and taps and dies in both metric and standard.

Kirkpatrick hopes to expand the operation to include auto shop classes, and is available to answer questions during shop hours, Monday thru Friday 5:30 p.m.-12 midnight, and 8 a.m.-midnight on weekends.

Junior Rodeo slated for Templeton FFA

Want to do some barrel racing? How about some pole bending or calf roping? If you're 18 years old or under the Templeton F.F.A. Junior Rodeo on September 28 is for you.

Calf, steer and cow riding as well as team roping will be among the events. Steer daubing and steer stopping are also planned for the contest.

Goat tying and breakaway roping events are being planned for young cowgirls. For the young rodeo enthusiasts, ages six and under, a pig scramble is being organized.

Silver buckles will be awarded to the first place winners in all events and ribbons will be awarded to people earning up to sixth place.

There will also be trophy buckles for all-around cowboy and cowgirl and a perpetual F.F.A. trophy will be awarded to the highest placing F.F.A. chapter.

San Luis Obispo County Fairgrounds in Paso Robles will be the sight of the rodeo which is open to non-F.F.A. members. Entry blanks are available at most western and feed stores.

Grid Schedule

While the Mustang's 5-4-1 record last year would have pleased many a coach, for Joe Harper it was a letdown. Harper is used to winners. He had five straight league championships in his hip pocket before plunging into the troubled waters of 1974.

This year, Harper will be out to nurse his charges back to their normal head-knocking ways. It won't be a cake job, however, because the schedule-making wizards have dealt the Mustangs a tough one.

Cal Poly will face three Divisions I schools including Cal State Long Beach and a much-improved Fresno State.

Also scheduled are non-league bouts with Boise State (this game was played already Sept. 20 at Boise, the genius who put that one on the calendar apparently didn't understand students don't hit the books until Sept. 27 and that this newspaper went to the presses Sept. 19), Nevada-Reno and Idaho State.

And those are all non-league. The Mustangs also play four California Collegiate Athletic Association games and since there were three new coaches in the league last year, the teams should all be improved.

★★★★

Here is a schedule of Cal Poly games:

Sept. 20 Boise St. (a)
Sept. 27 Fullerton (h)
Oct. 4 Fresno St. (h)
Oct. 11 Nevada-Reno (a)
Oct. 18 Cal State L.A. (h)
Oct. 25 Northridge (a)
Nov. 1 UC Riverside (a)
Nov. 8 Idaho St. (h)
Nov. 15 Long Beach (a)
Nov. 22 CP Pomona (h)
(h) designates game to be played here. (a) designates an away game. All home games will be played in Mustang Stadium and start at 7:30 p.m. Nov. 8 Idaho State game will be the Cal Poly homecoming. Cal State Los Angeles, Cal State Northridge, UC Riverside and Cal Poly Pomona are all league games for the Mustangs.

Clancy Edwards

Poly sprinter named CCAA's best in 1974

Cal Poly's heavyweight sprinter, Clancy Edwards, had some more hardware pinned to his already medal-laden chest when he was named the California Collegiate Athletic Association Athlete of the Year for his efforts last track season.

The jackrabbit jock was the first Mustang sprinter to win both the 100 and 220 yd. dashes in the NCAA Division II championship in the same year. He also was first to the tape in the two events at the CCAA championship and placed third in the 220 running with the "Big Boys" at the Division I championships.

Edwards was ranked No. 9 in the world and No. 3 in the United States in the 220 event by whomever it is that ranks fleet-footed scantily-clad men who run around oval tracks.

And perhaps the best note of all is that Clancy Edwards still has two years of eligibility left as a Mustang.

Other Cal Poly athletes who have won the award are triple jumper Mohinder Gill, 1970, high jumper Reynaldo Brown, 1971, and wrestler Glenn Anderson, 1972.

Football 1975

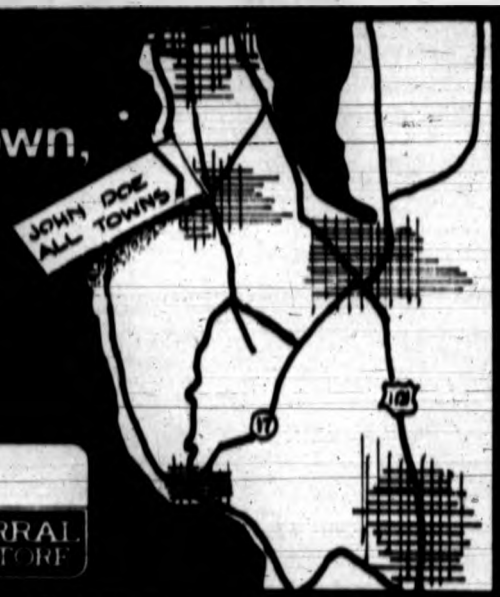

Hungry Mustangs Drool Over Prospects

After a year of frustrating last, the Mustang football team is hungrily anticipating a feast in 1975.

The gridgers suffered through a suprisingly shoddy 5-4-1 season last year, and this time around the 40 returning lettermen should be ready to stomp, kick and kill any group of football players foolish enough to stand in their way of improving the record of last year.

'Last year we were mediocre...this year could be as good a team we've ever had.'

Auto Body Collision Service
of San Luis Obispo

South Broad St. at Francis 544-4900

"Last year we were mediocre both offensively and defensively," said Mustang coach Joe Harper, master of understatement. "We should be considerably better in 1975. In fact, this could be as good a team as we've ever had."

As good, indeed. When the Mustangs face Fullerton here Saturday night at 7:30 P.M., the starting offensive and defensive teams will be nearly free of any unfamiliar faces. Some nine returnees fill the ranks of the offensive 11, while seven defensive starters will be back to settle some old scores that must still smart.

The Mustangs should be especially sharp on offense. "We'll be a solid offensive football team," said coach Joe. "Balance probably will be our strong suit. We should be able to run and pass effectively without loading up on any one individual. I can't see any particular weakness on offense."

Leading the offense will be tailback Gary Davis. Last year the big 5-11, 195 lb. cannonball shot through the CCAA like a marine through a gay liberation front meeting, leading the league with 880 yards rushing and a 5.3 average.

Futhermore, stat freaks would be glad to know that Davis ranks 10th in career rushing for Cal Poly with 1124 yards. His 880 yds. season added up to the third highest total ever by a pigskin packing Poly warrior.

Rocky Chapman and Bob Trudeau, both two year letterman, also will see a lot of action in the Cal Poly running corps. Fullback John Henson is expected to put his 220 lbs. to good use this year as a blocker-short yardage man.

Turning on the daylight for the Cal Poly running backs will be a line led by giant of giants Kent Leland.

Last spring, Leland gained some off-season fame by saving a man from the death grab of an evil rip tide at Pismo beach. During the season, he gained equal fame by saving green and gold clad running backs from the grizzly grip of opposing linebackers.

Standing 6-4 and weighing 235, the big guard was a first team All-coast pick last year and has a good chance of inking a pro contract at the end of this season.

Other standouts on the offensive line will be guard Bob Ranger, center Gordon Shaw and tackles Buck Rohles, Paul Freberg, Ken Dorgone and Kevin Kennedy.

The only offensive question mark is the mysterious Mustang

Gary Davis

passing attack. While the team is deep with sticky, banana-fingered receivers, it is still not sure who will be throwing to them.

Once again, as they did last year, Rich Robbins and Cliff Johnson will be tooting it out for the starting signal-caller spot. Robbins, after a Johnson injury early in the season, impressed many with his running and leadership abilities. But Johnson is a well man once again after suffering a shoulder injury and he should give Robbins a hard fight for the first-string spot.

Whoever gets his fingers on the football's laces will be blessed with a bevy of top-notch ball-grabbers to throw to.

Flanker Walter Mead is back for his fourth year as a starter. He has won All-America honors as a hurdler on the Poly track team and this might be the year he proves he can run and jump just as well with a football in his hands. Also looking for passes will be tight end Dana Naltzger known on campus for shoulder-length hair and shoe-string catches. Rick Beatty will be the other tight end in the tight Mustang I formation.

When the final run is made and the last passed thrown, the Mustangs probably will have

scored enough points to better the record of last year.

The Mustangs started slow last year with a 1-5-1 record. After that dismal debut, there was little else to do but build. In the final reel, Cal Poly had a run of 16 straight California Collegiate Athletic Association wins broken by a U.C. Riverside. And then it tied Cal Poly Pomona. The two setbacks were enough to keep Poly from stomping the rest of the league and winning the league crown for the sixth straight time.

But all was not gloom in 1974, there was, after all, Dennis Sherlock.

This rotund looking character made all-league defensive tackle last year and there is no reason to believe he will slack off in 1975. He doesn't look like a killer. Chubby and baby-faced, Sherlock looks more like a pleasant monk than a quarterback-eating lineman.

But looks can fool. Suprisingly quick, Sherlock was easily the star of the defense last year and can be counted on for some smacking smashes this season.

Helping out on the line will be Rick Bonar, who has lettered in his two years here.

Graphic Communications Students

The University Graphic Systems (UGS) is now accepting applications from Graphic Communications students for part-time staff positions.

UGS is a student run organization that operates out of the Graphic Communications Department. We print the Mustang Daily, Outpost and a large number of other campus publications.

Individuals of various skills and talents are needed to become specialist in a variety of jobs from on line production to staff management.

If you would like to become involved in a unique combination of education and production, stop by our office and pick up an application. We are located in room 211-B in the Graphic Arts building.
